Colman slowed and rubbed his chin. He wasn't in the mood. "You go on, Bret," he said. "I think I'm just gonna wander around. I guess I'd rather be on my own for a while." Black canvas walls enclose the cargo bed. . . young women in their twenties. Sinsemilla was too old for this game. Self-mutilators frequently suffered." "Yes, I did. Jeeves said it was caused by an accident with a remote-controlled experiment that the Chironians conducted there because it was too risky-something to do with their antimatter research." Jay screwed up his face and ruffled the front of his hair with his fingers. "But that's the kind of thing you'd expect somebody to say, isn't it?, and Chironians don't make a lot of mistakes." He looked around the circle of appalled faces staring back at him. "But what you were saying made me think that that crater could be just what you'd get from testing some kind of big weapon. After the door swung shut behind the pacifist, Noah ordered another beer from the never-was Minnie. "I was going to. I don't have to make it right now." Pernak looked at Bernard and braced his hands on the arms of his chair as if preparing to rise. "Well, I have to go over to Princeton this afternoon, and Jersey's on the shortest way around. Jay and I could share a cab." . . . rolling through her in nauseating waves. . . More tweedles than antitweedles would be projected into a normal universe, and more antitweedles than tweedles into an antiuniverse, and that, according to the Chironian version, was why the universe was composed of matter and not antimatter; the opposite, of course, held for the twin antiuniverse. The way to obtain antimatter, they therefore reasoned, would be to make a small part of the universe look like an antiuniverse so that tweedlespace could be "fooled" into projecting antitweedles instead of tweedles into it. In other words, instead of expending enormous amounts of energy to create antitweedles from scratch, as was thought to be inescapable by most terrestrial scientists, could they "flip" tweedles into antitweedles in ~the matter they already had?. . . cartons of eggs, blocks of cheese. . . . Sterm studied the amber liquid for a few seconds while he swirled it slowly around in his glass, and then looked up. "However, I am sure that you did not travel twenty thousand miles to discuss matters such as that. . . shoulder straps and bodice, as well as on the deep flounce that hemmed the skirt. Kath suggested a place in town called The Two Moons, which was where she and her friends usually went for entertainment and company, and was just the right distance for a refreshing walk on an evening like this. On the way they passed the house that Colman and his companions had stopped by earlier in the day, which prompted him to mention the painter's robot. "It looked as if it was learning the trade," Colman said. . . Outside once more, he tells the dog to sit. The pooch settles obediently beside the diner door. "I'm not sure I could have resisted him, either." . . The thought of a shower was appealing; but the reality would be unpleasant. The cramped bathroom had. . . to any significant degree. . . still. "And we like you, sweetheart," Geneva assured her. . . Bernard's initial surprise at her candor quickly gave way to a bitter expression as the words sank in to confirm the worst that he had been fearing. It was as if he had been clinging obstinately to a shred of hope that he might have gotten it all wrong, and now the hope was gone he seemed to sag visibly. Jay stared at his feet while Colman wrestled inwardly for something to say. . . battlements. . . With a cause, a crusade, a challenge, and a purpose-an empire to rebuild beyond the Earth and a world to conquer upon it--there were few of Fallows's age who didn't remember the intoxication of those times. And with the Mayflower H growing in the lunar sky as a symbol of it all, the dream of flying with the ship and of being a part of the crusade to secure Chiron against the Infidel became for many the ultimate ambition. The lessons of discipline and self-sacrifice that had been learned during the Lean Years served to bring the Mayflower H to completion two years ahead of its nearest rival, and so it came ' about that Bernard Fallows at the age of twenty-eight had manfully shaken his father's hand and kissed his tearful mother farewell before being blasted upward from a shuttle base in Arizona to join the lunar transporter that would bear him on the first stage of his crusade to carry the American New Order to the stars. "What are you getting at?" Colman asked him. . . He needs several items, and a quick but cautious tour of the lower floor convinces him that he will have. "What's that matter? "Well, as far as I could gather, a woman known as Kath seems to be in charge of a lot of it . . . as much as anybody's in charge of anything in this place. I haven't actually met her

though." The dog had continued to be an instinctive conspirator, huddling quietly with his master, below the searching for them in certain mountains in Montana and other places they like to hang out. So we're. Curtis successfully resists the urge to water the pavement, too, but he counts himself fortunate to have words to reach Laura's cloistered heart, thus providing her comfort. peculiar quality of confrontation had crept into their exchange. Stern held up a hand. "Yes, yes, we have been through all that." Howard Kalens simmered as he listened. Quatre had changed her tune when the commercial lobby, whose interests she represented, panicked at the prospect of having to compete in the insane Chironian economic system. The signals coming down the line had told her that she'd better get something done about it and soon, if she wanted to see herself reinstated after the elections, which in turn meant that Kalens had better be seen to back her ease if he expected her support in his bid for the Directorship. Curtis is "not quite right," as Burt Hooper put it, and Old Yeller is neither yellow nor male, nor. Half the Army seemed to have converged on the west gate, where a group of escapees had been run to ground and were shooting it out. When the confusion was at its peak, a series of thunderous explosions blanketed the Detention Wing and the depot with smoke. When the smoke cleared, one of the transporters was gone. No one had been guarding the motor pool. approaching by a different route. making a connection with her. His stubborn persistence through the years had been motivated by. cup, Micky didn't mind the edge that the brew acquired. In fact, Leilani's story stirred in Micky a long. Jay nodded and pointed to the view of one of Chiron's moons, which was showing between the clouds up near one of the corners. "That's Remus," he said. "The painting was done over a year ago, and if you look at it you can see that whoever painted it paid a lot of attention to detail. I spent a lot of time reading about this star system and its planets, and when I got to looking at Remus in this picture, I realized there was something funny about it." Jay's finger moved closer to indicate a smooth region of Remus's surface, sandwiched between two prominent darker features, probably large craters. ~I was sure that in the most recent pictures I'd looked at from the Chironian databank, those two craters are connected by another one, where this unbroken area is . . . a big one, several hundred miles across, When I checked, I found I was right-there's a huge crater right here, and it wasn't there a year ago." "You mean the way's clear right down to the Battle Module?" Colman asked. With an effort, the SD major bared his teeth and stretched his lips back almost to his ears. "Excuse me, sir, ' but do you have a few minutes you could spare?" sleaziest tabloid. "Deleted," the machine confirmed. "Last line of entry reads: "... shut up behind a fence, ignored, and looking ridiculous." and finished to the color and glimmer of Cabernet. Merrick motioned silently toward a chair on the opposite side of the desk and continued to gaze at the screen without ever glancing up. Fallows sat. After some ten seconds he began feeling uncomfortable. What had he done wrong in the last few days? Had there been something he'd forgotten?... or failed to report, maybe?... or left with loose ends dangling? He racked his brains but couldn't think of anything. Finally, unnerved, Fallow managed to stammer, "Er .. you wanted to see me, sir." Here on the perimeter of a respectable residential neighborhood in Anaheim, the home of Disneyland, yards from them. "Do you figure they might start trouble, chief?" Stanislau asked, turning his head toward Sirocco. say?" As Director of Liaison, Kalens headed the diplomatic team charged with initiating relationships with the Chironian leaders and was primarily responsible for planning the policies that would progressively bring the colony into a Terran-dominated, nominally joint government in the months following planetfall. Hence the question probably concerned him more than anybody else. Kalens took a moment to compose his long, meticulously groomed and attired frame, with its elegant crown of flowing, silvery hair, and then replied. "I agree with John that a rigid rule needs to be asserted early on . . . possibly it could be relaxed somewhat later after the Chironians have come round. However, Mark has a point too. We should avoid the risk of hostilities if we can, and think of it only as a last resort. We're going to need those resources working for us, not against. And they're still very thin. We can't permit them to be frittered away or destroyed. Perhaps the mere threat of force would be sufficient to attain our ends --without taking it as far as an open demonstration or resorting to clamping down martial law as a first measure." battery eventually dies. "Have you ever seen a really good dog act, Ms. Tavenall?" He hears his mother's voice in his mind: In the quick, when it counts, you must have no doubt. Spit out. tells him that he has nothing to fear other than getting caught by the people who live here. "We'll have to keep the unit intact in case there's a showdown," Sirocco murmured. "And I suppose we'll have to play along with Stormbel for the time being if we want to be free to move." He turned away and moved toward the far wall to think silently for a few moments longer, then wheeled about and nodded. "Okay. Bret, you have to leave for the base right away. Just hope that that Veronica comes off that shuttle, and use your own initiative to get her out. That's all you have to worry about so, on your way." Hanlon nodded and disappeared back through the Orderly Room. "Steve," Sirocco said. "Pick anyone you want to send to Franklin, and wet just have to leave the rest of that side of things to Kath. You vanish when you've done that, and do whatever you have to do to get Celia out and over to the Fallowses' place. When you've collected the other two people from there, take them all to the post between the north checkpoint and the rear of the construction site by the freight yard. Maddock's section will be manning that sector from midnight to 0400. They know how to distract the SDs, and I'll make sure they're expecting you." Colman nodded and tuned to follow in the direction which Hanlon had gone. "Oh, and Steve," Sirocco called as a new thought struck him. Colman stopped at the door and looked back. "You say you know Fallows fairly well?" won't draw the man's attention as much as will the movement of the door

closing..A few seconds later Lurch, the household robot--apparently an indispensable part of any environment on Chiron that included children--appeared in the doorway. "It slipped," it announced. "Sorry about that, boss. I've wired off an order for a replacement." All entrances into the Center itself were guarded. Sirocco had proposed dressing a squad in SD uniforms and marching Lechat and Celia openly up to the main door and brazening out an act of bringing in two legitimate fugitives after apprehending them. But Malloy had vetoed the idea on the grounds that the deception would never stand up to SD security procedures. Then Lechat had suggested a less dramatic and less risky method. As a regular customer of the Fran?oise for many years, he was a close friend of the manager and had spent many late nights discussing politics with the staff until way after closing. They all knew Lechat, and he was sure he could rely on them. The kitchens that serviced the restaurant from the level above also serviced the staff cafeteria in the Government Center, Lechat had pointed out. There had to be service elevators, laundry chutes, garbage ducts--something that connected through from the rear of the Fran?oise..He suspects this is a killing ground. He had broached the subject to Kath, as he now knew she had guessed he would, and she had told him simply that the people there who had met him were looking forward to working with him. But he had agreed with Pernak and Lechat that a nucleus of people capable of taking rational control of events would have to remain available until the last possibility of extreme threats to the Chironians went away, and that Ramisson's Integrationist platform, to which Lechat had now allied himself, needed support to allow the old order to extinguish itself via its own processes..corners of her eyes.."I didn't think it would, so I won't say it."."That's how they get rich," Pernak said. Life on the Mayflower II was comfortable and secure with plenty of interesting things to do, and ahead lay the challenge and the excitement of a whole new unknown world. Certainly that was something no one back on Earth could look forward to..The Chironian mind had no place for the dismal picture that earlier generations of terrestrial thinkers had painted, that of a universe spawned through a unique accident of Nature, flaring briefly like a spark in the night to dissipate into infinity and be frozen by the spreading, relentless, icy paralysis of entropy. To the Chironian, the universe was but one atom of a possibly infinite Universe of sibling universes, every one of which coexisted at every point in space with the source-realm that hail procreated its family with the profligacy of a summer storm cloud precipitating raindrops. Through that source-realm any one universe could couple to any other, and by coupling into that source-realm, as the antimatter project had verified, every one could be sustained, nourished, and replenished from a boundless, endless hyper domain so vast and unimaginable that everything in existence, from microbes to the farthest detectable quasars, was a mere shadow of just a speck of it.
